Lego hidden side sets 2020

-Ends—About LEGO Hidden SideCore LEGO Building ExperienceLEGO Hidden Side building set gives all the loved and expected children from the LEGO building experience - development challenges, detailed models with functionality, and minifigure characters set in a story-driven universe. Each model can be built as it appears day by day – e.g. fairground or lighthouse – and has transform functionality to become a haunted version itself. Truly Augmented Play This app lets kids assume a first-person perspective as they explore their hometown of Newbury, using their phones to see and solve paranormal mysteries beneath the surface of their environment. The game encourages children to hold their phones up to physical LEGO models and interact with various elements, or 'points of ownership', that release virtual ghosts that children then have to catch in AR games to stop ghosts. Many scenarios create dynamic gameplay that requires children to keep one hand in each world to develop drama. The app experience will continue to evolve with the addition of new ghosts, new game challenges, and gameplay randoming so that the experience is different every time the kids play. For more information, visit www.lego.com/hidden-side After revealing the latest and upcoming LEGO City sets, another wave of home-made LEGO sets is definitely on the way for the second half of the year. Online retail company Rakuten France has given us a glimpse of the LEGO Hidden Side set for summer 2020, with five new sets to watch out for. LEGO Hidden Side has proven itself quite popular since its debut last year. Bringing together game elements through traditional brick buildings and the use of augmented reality, LEGO Hidden Side gathers enough momentum to have a huge following among LEGO fans. We saw the release of six new sets at the beginning of this year, and for the second half of 2020, we can now expect four sets of LEGO Hidden Side summer 2020 to launch in June or in the last part of May. To be clear, it seems that Rakuten has taken these pictures out of their website so I would like to thank Brickfinder for publishing these images. We all still prefer to see better high res res images of LEGO Shop@Home, including product descriptions of each set. I will update this post once more official info arrives. But for now, let's take a peek at what this wave has to offer. JB's Submarine (70433) Supernatural Race Car (70434) Abandoned Prison of Newbury (70435) Ghost Firetruck 3000 (70436) This is not the best picture we have so far, but we can somehow see that this new set will introduce some new and minifigure accessories that you may find interesting. For example, I like how the wheels on the race car turn out, plus the new robot screen minifigure in the Ghost Firetruck 3000. According to the story, it also seems that new villains will be introduced in this theme as well. Not shown in this LEGO wave The set side summer 2020 is the fifth (which looks like the largest in this collection as well) which resembles a kind of observatory. This set is not yet listed on LEGO Shop@Home this post, but we can probably expect this to be listed on the LEGO shopping portal in the near future. Today, LEGO has taken a wrap from the January wave set for an augmented reality theme introduced earlier this year, Hidden Side. Each brick-built set pairs with the Hidden Side app to create games about finding and capturing ghosts to save the fictional town of Newbury. The new six-set wave features more locations around the city such as fairgrounds, portals and even subway stations, each with a spooky twist. There's even an unpleasant thing called the Dark Lighthouse. The new set will be available as soon as Christmas, starting December 27. The U.S. parts and pricing count has not been revealed, but you can check the rest of the information set out below, along with an official press release outlining studies on the physical effects versus digital play on children. Portal 70427 | €19.99 | Available Dec. 27, 2019 The LEGO® minifigures Jack, Axel Chops, Scrimper and Waylon bring the spooky subway to life, and ghost hunting with the free LEGO® Hidden Side augmented reality app™. This dark secret is revealed, and the children have to record it with the ghost boss Lady E. 70428 Jack's Beach Buggy | €19.99 | Available Dec. 27, 2019 Here's how to build and play around finding Jack's beach train with LEGO® minifigures Jack, Parker and Scott Francis, two-headed ghosts. With the LEGO® Hidden Side™, kids can pick up ghosts, chase clues, and fight against trucker dale ghost bosses. 70429 El Fuego Stunt Plane | € 29.99 | Available Dec. 27, 2019 Single-player or multiplayer mode brings propeller planes to life with LEGO® Minifigures El Fuego, Jack and Mary Breaksom. With the help of free LEGO® Hidden Side™ children to bring out ghosts. At the end of a haunting ghost hunt and the search for hidden clues awaits the fight against ghost boss Harry Cane! 70430 Newbury Underground Station | € 29.99 | Available Dec. 27, 2019 Along with Jack, Parker and Pete Peterson touring, exploring interactive subway models for a fantastic augmented reality experience. The lego® Hidden Side app™ transform the model into a mysterious portal, waiting for an exciting adventure in the world of digital games. 70431 Dark Lighthouse | €49.99 | Available Dec. 27, 2019 The Lighthouse of Darkness explores interactive lighthouse models of Jack, Parker, Skeleton, Jennie Napo and Claus Stormward. With the free LEGO® Hidden Side™ app, this model lives on and turns into a digital world full of ghosts, hidden clues, and ghost boss Joe Ishmael. 70432 Ghost Fair | €49.99 | Available Dec. 27, 2019 It's haunting Along with lego included® minifigures Jack, Parker, JB, Jimbo Loblo and Terry Top, Top, coaster and fall tower model Ghost Rummels can be seen. Read LEGO's full press release below: November 14, 2019 A neuroscientific study shows that the concept of physical-digital games such as LEGO® Hidden Side™ makes kids more creative Munich. November 14, 2019 - Digital skills yes, but please not at the expense of creativity and imagination. Especially parents, the pursuit of their children on digital is often anything but true. Concerns that too much screen time has negative consequences and sacrificing good old play with drafts push them around. A neuroscientific research* conducted by the Goldmedia research institute on behalf of LEGO® Hidden Side TM now shows that physical and digital combinations, i.e. figital, play have a positive effect on sensory and motor skills and can promote children's creativity. Parents are always faced with changes in nurseries. If magic cubes or discman are still available to previous generations, digitization has made it much more opaque. As a result, parents are often cautious especially with digital gaming offerings. According to LEGO Group's Play Well Report 2018, 41 percent of parents surveyed questioned the positive impact of digital gaming. However, a neuroscientific study commissioned by LEGO® Hidden Side™ now shows the positive effects of figital gaming. Figital games with LEGO® Hidden Side TM, a combination of physical and digital games, show mental patterns that show improved creative processes in the brain. Florian Kerkau, director of studies at Goldmedia. The results of the investigation also show that various virtual-physical play requirements can be expected to have a positive impact on basic and specific cognitive abilities. It trains, for example, concentration or memory range, but also skills such as logical thinking and planned actions as well as a process of attention and recognition, Kerkau continues. Neuroscientific results from the investigation in the overview Of physical games made especially analytical, cognitive brain activity and training in certain skills such as logical thinking, memory range or fine motor skills . In contrast, digital games mainly activate emotions, spontaneity, and reaction speed. In addition, skills such as orientation, attention and perception as well as cognition are promoted. In the case of figital play, study participants showed high levels of focus and concentration overall. Measurements of brain activity also showed increased creativity. Figital games stimulate different areas of the brain The central result of neurophysiological analysis: Physical and digital varieties differ significantly in their cognitive needs and complement each other optimally. If in pure physical games, especially analytical and special motor requirements are placed in children, where the spatial imagination play with the inclusion of Augmented reality applications require a completely different set of cognitive skills. Here, information processing must be very fast, motor reactions occur spontaneously, which among other things promote spatial orientation through augmented reality and can positively affect a child's creativity and activity. * About the study on behalf of LEGO® Hidden Side TM, Goldmedia Custom Research GmbH conducted a neuroscientific study in October 2019 with 33 children aged 10 to 14 years. The study looked at children's responses to play with LEGO kits® Hidden Side™ and related augmented reality apps using EEG measurement, facial analysis, and measurements of electrodermal activity (EDA). The initial measurement occurred while building a LEGO set® haptic and repeated as the subject performed a virtual ghost hunt around the kit using an AR app. In addition, qualitative interviews and surveys with questionnaires were conducted among the subjects.
